Ref. Ares(2023)2259273 - 29/03/2023

Symbolic Logic Framework for Situational Awareness in Mixed Autonomy

Project funded by the European Innovation Council and SMEs Executive Agency

D7.6 Report on public website

Work Package: WP7

Authors: Arabinda Ghosh and Sadegh Soudjani

Project Title: Symbolic Logic Framework for Situational Awareness in Mixed Autonomy

Project Acronym: SymAware

Grant Agreement number: 101070802

Project Start Date: 1st October 2022

Duration: 36 months

Project Coordinator: Max-Planck-Gesellschaft Zur Forderung Der Wissenschaften EV (MPI-SWS)

Project Members:

Max-Planck-Gesellschaft Zur Forderung Der Wissenschaften EV (MPI-SWS)

Technische Universiteit Eindhoven (TUE)

Kungliga Tekniska Hoegskolan (KTH)

Uppsala Universitet (UU)

Stichting Koninklijk Nederlands Lucht - En Ruimtevaartcentrum (NLR)

Siemens Industry Software Netherlands BV (SISW)

Document Identifier: D7.6
Issue: 1.0
Issue Date: 23.03.2023
Prepared by: MPI-SWS
Approved: Yes
Dissemination Status: Confidential, only for members of the consortium

1. Introduction

1.1 Deliverable Description

The general technical goal of this particular work package is to develop a website and social media campaigns that are up to date with the latest web development standards and are easy for users to navigate. In this project, our specific objective is to:

- Develop a website in a way that prioritizes the satisfaction and ease of use of the users, ensuring a positive user experience;
- Create an attractive and consistent visual identity that aligns with the established style guide;
- Build a website that is user–friendly and easy to navigate for all users, using the most popular internet browsers;
- Develop essential functionalities for the project's success while avoiding overloading the website with unnecessary features;
- Ensure that user data is stored securely in the database and protected from unauthorized access by third parties, thus providing a safe web environment.
- Promote networking through web–based tools that enable offline meetings and other activities;
- Facilitate knowledge sharing by ensuring that project outputs and publications are easily accessible and can be reused effectively.
- Manage and monitor registered users on the platforms. The project website will feature comprehensive information about the SymAware project, including its objectives, consortium, work processes, and current status. It will provide information to interested parties and the general public. The website will also serve as a platform for outreach activities, including a periodic newsletter that updates readers on the project's progress, dissemination materials, deliverables, and event calendars. This task will also involve creating appropriate social media accounts (e.g., LinkedIn) and developing a plan for their use, ensuring a constant presence with new content.

1.2 Relation to Other SymAware Deliverables

The work package dissemination and exploitation (WP7) aims to establish a methodology that leverages the networks of stakeholders and fosters cooperation with other work packages to gather

information and achieve broad dissemination of the project outputs. Additionally, this strategy includes efforts to evaluate various options for ensuring the portal's long-term sustainability and usability beyond the project's end date. WP7 consists of four tasks, which are

1. Plan for dissemination and exploitation including communication activities;
2. Data management plan;
3. Public website;
4. Software tools on public Git repository.

2. Project Website

2.1 Achieved Objectives

A website has been created as the primary dissemination platform for interested stakeholders of the SwmAware project (`https://www.symaware.eu/`). The project website serves the following purposes:

- Introduce SymAware to external stakeholders, present the project's main objectives, describe the portal that will be deployed, and highlight the results.
- Attract more stakeholders who are interested in the project.
- Share updates on the project's progress, event calendars and interim and final public documents/deliverable.
- Provide a collaborative platform for consortium partners to upload, download, and update project material and documents.

2.2 Website Structure

The website is divided into several sections.

- Homepage: Presents the high-level idea and the objective of the project;
- Available positions: Advertisement to attract potential research collaborators;
- Consortium: Presents the project members;
- Scientific output: Scientific contributions will be updated here;
- Dissemination: Dissemination reports will be shared here;
- Demonstration: Demonstration about methods and materials used in this project will be updated here;
- Contact Information: Contact Information of all members is available here;
- Social Media: Links of different social media accounts of this project will be updated here;
- More: Additional information (e.g. related projects and research efforts) will be updated here.

2.3 Website Appearance

The website was developed by the project members from MPI-SWS and made public in December 2022. The following screenshots are selected to illustrate the website's appearance.

Figure 2.1: Screenshot of the homepage of the website.

Figure 2.2: Screenshot of the structure of the website.

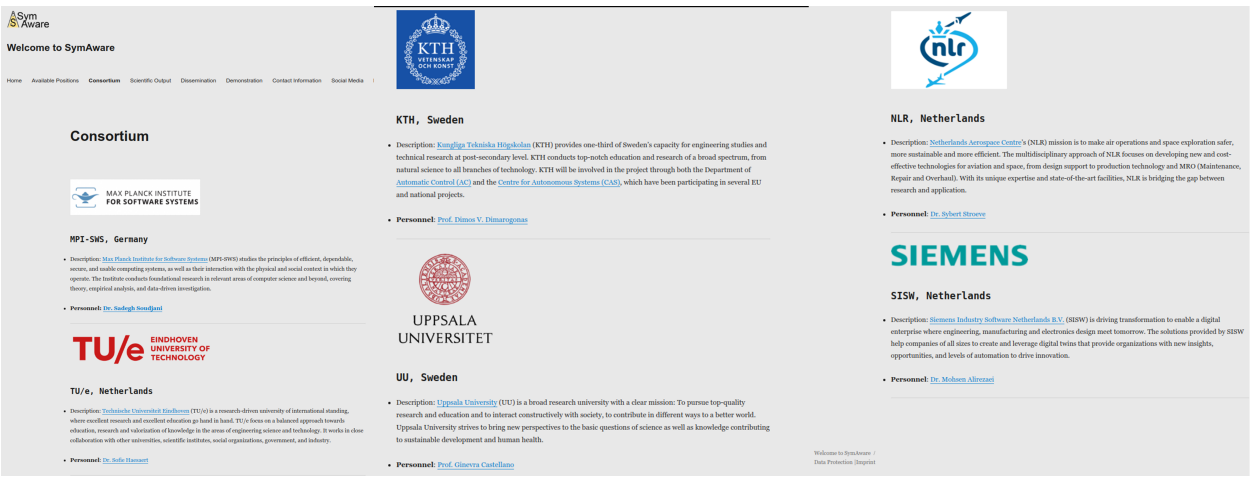

Figure 2.3: Screenshot of the consortium page.

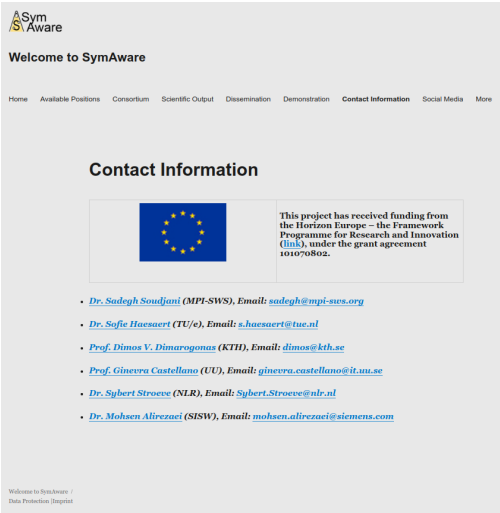

Figure 2.4: Screenshot of the contact information page.

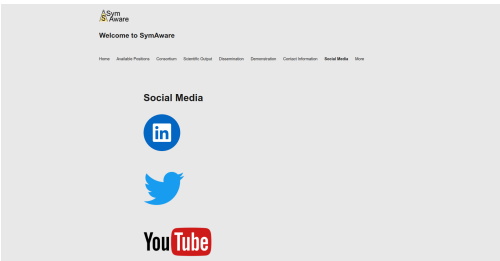

Figure 2.5: Screenshot of the social media page.

2.4 Website Management and Further Developments

MPI-SWS developed the website and it will be maintained by them. To improve the website's content over time, the project beneficiaries and PI's will provide updates. Additionally, project partners will contribute by sharing information on their achievements and progress. The frequency of updates on the website will depend on the project activities.
