Ref. Ares(2023)2259245 - 29/03/2023

Symbolic Logic Framework for Situational Awareness in Mixed Autonomy

Project funded by the European Innovation Council and SMEs Executive Agency

D8.1 Project collaborative platform

Work Package: WP8

Authors: Arabinda Ghosh and Sadegh Soudjani

Project Title: Symbolic Logic Framework for Situational Awareness in Mixed Autonomy

Project Acronym: SymAware

Grant Agreement number: 101070802

Project Start Date: 1st October 2022

Duration: 36 months

Project Coordinator: Max-Planck-Gesellschaft Zur Forderung Der Wissenschaften EV (MPI-SWS)

Project Members:

Max-Planck-Gesellschaft Zur Forderung Der Wissenschaften EV (MPI-SWS)

Technische Universiteit Eindhoven (TUE)

Kungliga Tekniska Hoegskolan (KTH)

Uppsala Universitet (UU)

Stichting Koninklijk Nederlands Lucht - En Ruimtevaartcentrum (NLR)

Siemens Industry Software Netherlands BV (SISW)

Document Identifier: D8.1
Issue: 1.0
Issue Date: 23.03.2023
Prepared by: MPI-SWS
Approved: Yes
Dissemination Status: Confidential, only for members of the consortium
History Chart:

1. Introduction

1.1 Deliverable Description

The goal of this particular work package is to develop a project collaborative platform. The platform facilitates communication, coordination, and sharing of resources among the team members, regardless of their location or time zone. This will the project partners and the collaborators to contribute effectively and efficiently, without the need for physical proximity or face-to-face meetings. This will help to achieve the goals of the SymAware project more efficiently, by leveraging the collective intelligence and creativity of their team members. This project collaborative platform can be used by all the partners of the project.

1.2 Relation to Other SymAware Deliverables

D8.1 aims to develop a platform for sharing project documents (reports and meeting minutes) including document templates for Deliverable reports, presentation slides etc. Furthermore, the work package WP8 aims to achieve the following objectives:

- To make certain that the project accomplishes its objectives within the agreed-upon time and budget constraints.
- To guarantee that the project partners coordinate strategically and technically in the best possible manner.
- To carry out quality control and risk assessment activities.
- To maintain communication with and provide updates to the European Commission.

2. Project Collaborative Platform

2.1 Description

The SymAware project is using the following platforms to facilitate management and communication among the project members:

- Cloud storage solution (ResearchDrive) that is an ICT service of TUE and hosted and backed up on the servers in the Netherlands (`https://tue.data.surfsara.nl/`);
- GitLab repository (`https://gitlab.mpi-sws.org/`)

These two resources form an internal collaborative platform and provide partners with appropriate resources, monitoring, and planning procedures to ensure the efficient management of all technical work carried out in the context of the SwmAware project. These platforms are operational since November 2022 and were made available to all partners following the Kick-off meeting. TUE will oversee the administration of the platform throughout the project's duration and offer support to the consortium.

2.1.1 Cloud-based ResearchDrive

The ResearchDrive is primarily used for the following purposes:

- Name, role, and contact details of the project members;
- To share the details of the bi-weekly meetings among the project members (e.g. agenda, minutes, action points);
- To share the templates of deliverables and presentation;
- To share relevant documents of this project (e.g. research papers, details of the work packages, documents related to the demonstrator);
- To share the portfolio activities;
- To share the deliverables.

The following screenshots are selected to illustrate the appearance of the ResearchDrive:

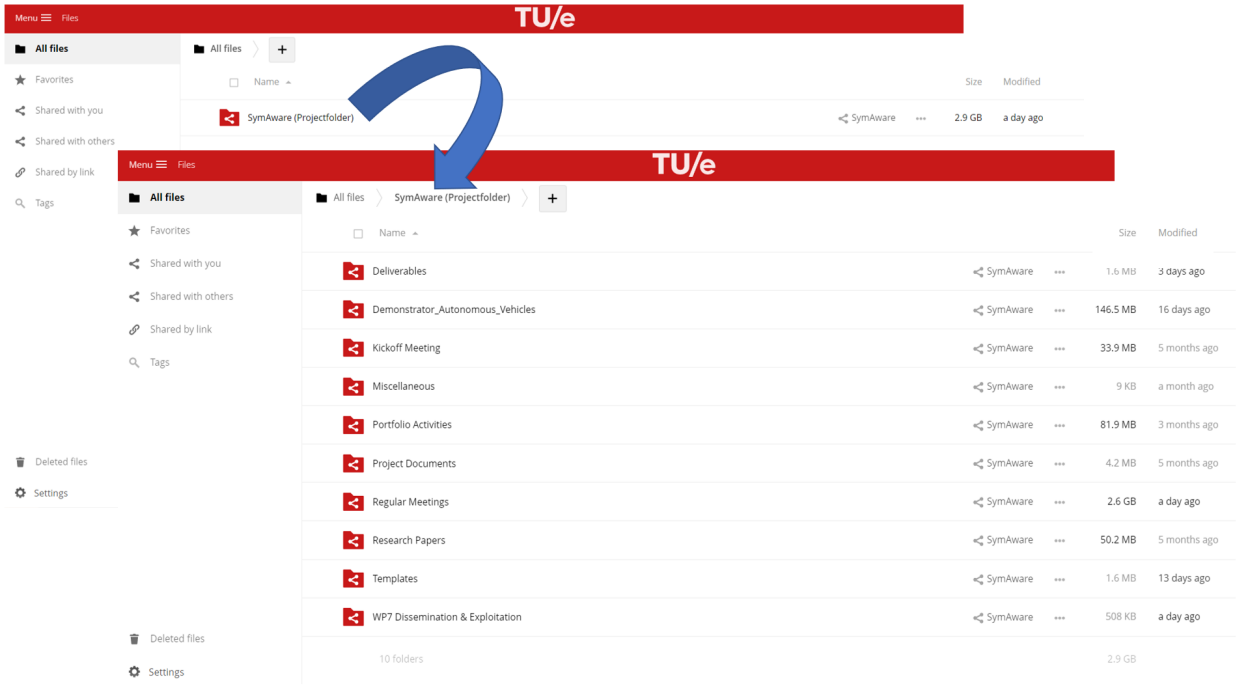

Figure 2.1: Screenshots of the cloud-based ResearchDrive.

2.1.2 GitLab repository

The GitLab is primarily used for the following purposes:

- To share the codes and software generated through the research work related to the project;
- To share relevant documents of this project (e.g. research papers, details of the work packages, documents related to the demonstrator);

The following screenshot is illustrating the appearance of the GitLab:

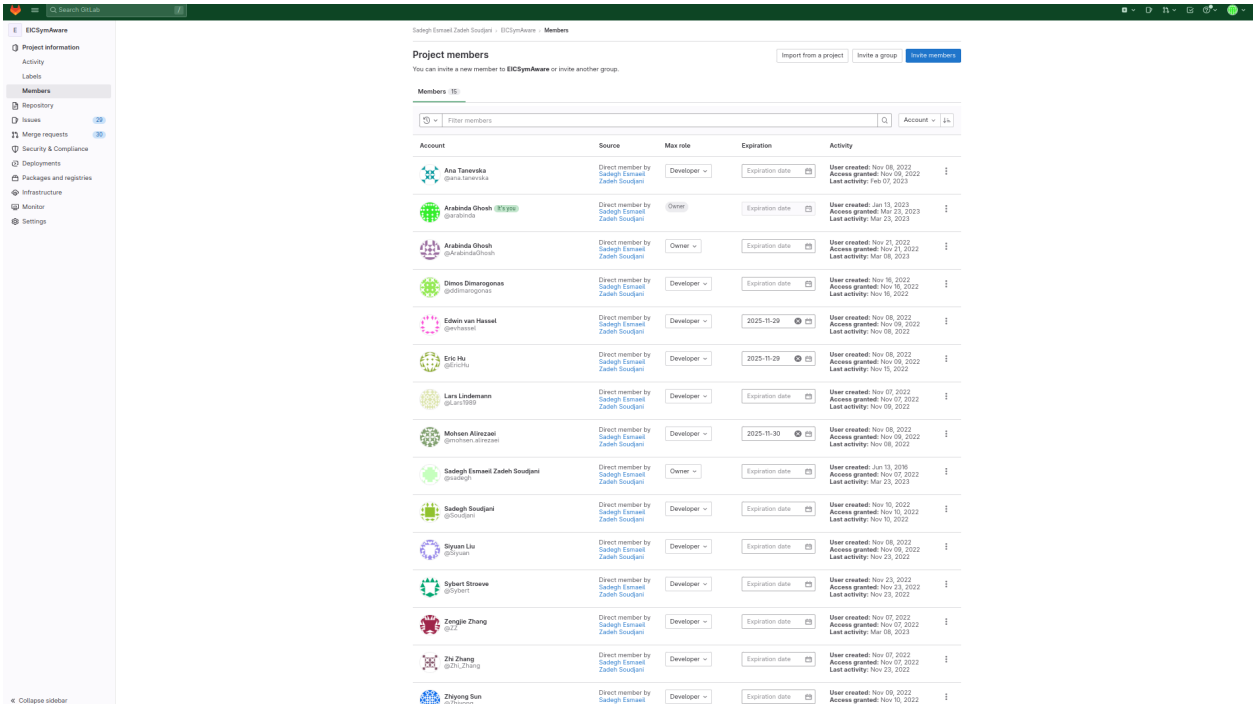

Figure 2.2: Screenshots of the GitLab repository.

2.2 Collaborative Platform Management and Further Developments

TUE is maintaining the Cloud-based ResearchDrive and MPI-SWS is maintaining the GitLab repository. All project partners will contribute by sharing information on codes, and deliverables related to the SymAware. The frequency of updates will depend on the project activities.
